

# Tank Division

## Septic Tank Sizing Guide

### Choosing the correct Septic Tank for your home is crucial to a proper installation.

The best way to gauge how big of a septic tank you need is to add up the number of bedrooms on your property.

| Number of Bedrooms             | Minimum Capacity (gallons) |
|--------------------------------|----------------------------|
| 0<br>(Small Apartments, Lofts) | 750                        |
| 1 - 3                          | 1000                       |
| 4                              | 1250                       |
| 5                              | 1500                       |
| 6                              | 1750                       |
