

Statement From Texas Commission on Environmental Quality

Via email, March 2024

“We do not issue approvals for proprietary septic tanks, so they are not listed on our approved product list and there is nothing to apply for. We do not consider proprietary septic tanks to be proprietary treatment systems like aerobic treatment units are. All septic tanks are just considered standard treatment systems according to Ch 285.

Proprietary septic tanks do not require TCEQ approval, though septic tanks used in Texas must still meet State requirements per Title 30 of the Texas Administrative Code Ch 285.32(b)(1). You can find this most easily on the Texas Secretary of State’s website.”
